PROFESSIONAL SUMMARY

Senior AI Engineer focused on real-time Voice AI and graph-based reasoning. I design and ship multi-tenant, low-latency platforms at startup pace—owning architecture, integrations (Stripe, HubSpot, Google/Calendly), MLOps, and production reliability. At OperatorLabs.ai (formerly Forloops), my work on an investor-backed voice AI product helped land enterprise clients and attract Silicon Valley investment. Comfortable across LiveKit/WebRTC/SIP, Neo4j/GraphRAG, Python backends, and data pipelines that convert conversations into revenue and measurable outcomes.

AI / ML SKILLS

NLP / ML / Generative AI	Telephony / PBX / VoIP	Backend / Cloud / DevOps
• RAG & GraphRAG, Prompt Engineering • Fine-tuning (OpenAI), LangChain & LangGraph • Scikit-learn, Vector Stores (Pinecone, FAISS, ChromaDB) • OpenAI API; Deepgram & ElevenLabs (STT/TTS) • n8n & Zapier automations	• LiveKit (Agents, SFU), WebRTC & SIP • Asterisk, Avaya, Genesys; LiveKit SIP bridging • Twilio, Linphone & softphones • IVR / DTMF design & routing	• Python (Flask, FastAPI), MySQL & Redis • AWS (Lambda, S3, SageMaker), Docker, CI/CD • Neo4j & GDS, MQTT & queues, LLMops • Stripe, HubSpot & Calendly APIs

EXPERIENCE

AI Engineer, *OperatorLabs.ai* (formerly Forloops) Feb 2023 – Present

Voice Ai Platform (Livekit, deepgram, elevenlabs, silero, twilio, avaya, asterisk)

- Architected and scaled a multi-tenant, agentic Voice AI platform on LiveKit handling thousands of inbound/outbound calls per day with sub-second responses.
- Built 5-minute onboarding that auto-creates RAG (incl. web scraping), accelerating sales and deployment for new businesses.
- Implemented robust call-flows: IVR/DTMF, voicemail detection, warm/cold transfers; added SIP bridging and history-aware context.
- Hardened the pipeline (VAD, end-of-turn, noise suppression) and multi-vendor STT/TTS/LLM support for reliability and latency.
- Integrated Stripe (billing), Google/Calendly (booking), HubSpot (CRM) with a generic webhook framework for post-call automation (transcripts, JSON/email summaries).
- Delivered analytics dashboards (e.g., collections ops) to surface call outcomes and coaching insights.
- Shipped an outbound call dispatch service (Python, MQTT, MySQL) with queue-based backpressure for concurrency and reliability.
- Implemented Google Calendar booking with OAuth2 token refresh and conflict checks (incl. transparency filtering).
- Designed data-layer upserts for *customer_history* across mapped IDs, reducing duplication and improving retrieval fidelity.
- Commercial impact: platform helped secure top-tier clients (e.g., Mark Spain Real Estate) and attract investors (e.g., JJ Zhang, Kevin Harrison).

GraphRAG Entity Resolution (Neo4j, LangChain)

- Built a graph-based entity resolution system in Neo4j with LangChain and OpenAI embeddings; achieved ~90%+ precision on deduplication tasks.
- Optimized Neo4j GDS similarity queries to double resolution throughput and cut manual review by ~70%.
- Added natural-language graph queries for explainable insights into merges and conflicts.

Fintech RAG Chatbot (LLM + Vector Store)

- Developed a secure, RAG-powered assistant that reduced support tickets by ~40% on complex Nigerian financial products.
- Ingested policy docs and plans into a vector index; delivered grounded, concise answers to natural-language queries.

AI Recommendation Engine (Shopify + Neo4j)

- Modeled user–product interactions as a real-time graph to drive personalized recommendations, lifting engagement by ~35%.

EDUCATION

FAST — National University of Computer & Emerging Sciences 2023

CERTIFICATIONS & TRAINING

- DeepLearning.AI short courses: Semantic Search with LLMs, Tools & Agents with LangChain, RLHF, LLMOps (Serverless on Bedrock), Knowledge Graphs for RAG, Agentic RAG with LlamaIndex, AI Agents in LangGraph, Database Agents, Function-calling & Data Extraction.

FREELANCE & INTERNSHIPS

AI & Automation Engineer, *Freelancing* 2022 – Present

- Zero-touch invoice automation via Zapier + Docparser; normalized data to Google Sheets for finance operations.
- n8n workflows integrating multiple Shopify stores with a central platform; secure webhooks for orders, refunds, and cancellations.
- Real-time notifications and order status updates delivered via Telegram bots.
- Custom web/data solutions with Python, Flask/FastAPI, and Docker for finance and healthcare clients.

Python Developer Intern, SkipQ Pvt Ltd (Remote)	2022
---	------

- Strengthened DSA/Python skills through real-world tasks and challenge platforms (LeetCode, HackerRank).

Full-Stack Intern, *Let'sGrowMore (Remote)* 2022

- Built front-end interfaces (HTML/CSS/JS) and back-end services (Django) for small web apps.
